

## All About That Case

Using the tune from All About that Base: Meghan Trainor

Because you know I'm all about that case,  
'Bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case

Yeah it's pretty clear that I don't have a shell  
But my snazzy case, well, it works just as well  
'Cause I got that sticky silk that invertebrates want  
It puts all the right rocks in all the right places  
I see those snails, working their hard shells  
We know they didn't build them  
Come on we work nonstop  
If you have cases, cases just go and show them off  
'Cause every inch of you is covered  
From the abdomen to the head  
Yeah, our mommas they told us to find ways to stay alive  
They said armor yourselves with cases where you can hide  
So we built these great cases with pebbles, grass, mud, and sand  
And we thrive in the rivers where water quality is grand

Because you know I'm all about that case,  
'Bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case

We're bringing cases back  
They are the best way to protect ourselves  
They help us stay in tact  
And I am here to tell you that  
Caddisflies are perfect from their abdomen to their head  
Yeah, our mommas they told us to find ways to stay alive  
They said armor yourselves with cases where you can hide  
So we built these great cases with pebbles, grass, mud, and sand  
And we thrive in the rivers where water quality is grand

Because you know I'm all about that case,  
'Bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case, no shell  
I'm all about that case, 'bout that case

## **LEECH FUNK**

Leeches are tolerant  
To pollution in water  
Some eat with a proboscis  
Which they insert and remove the fluids  
Drinkin', tastin', eatin' until they're full  
They're parasites and predators  
And prefer if water is still  
LEECHES (are cool)

About 1000 different kinds of them

LEECHES (are cool)

They camouflage with their environment

LEECHES (are cool)

They are even used in medicine

LEECHES (are cool)

They sit and wait for their food, listen up

A leech bit you on the leg (whoa)

A leech bit you on the hand (whoa)

A leech bit you on the foot (whoa)

'Cause that hungry leech wants to feast on you

'Cause that hungry leech wants to feast on you

'Cause that hungry leech wants to feast on you

At a testing site and only found a leech

So the water quality is poor (come on)
